The good news: more people are surviving cancer

While one-year survival rates in Hardwick are below the national average, our rate of improvement is faster – we’re closing the survival gap. (No data for prostate cancer. Source: Office for National Statistics)

One-year survival rates, %

- **Breast cancer**
  - Hardwick: 88.5%
  - England: 96.4%
- **Bowel cancer**
  - Hardwick: 61.2%
  - England: 75.1%

Over half of female patients with these cancers are under 65 when they are diagnosed, compared to less than a third of men. This is mostly because breast cancer affects younger women more often than other types of cancer.

Extra money needed by 2030 to be able to treat these people locally across the Working Together Programme region.
