CANCER IN DONCASTER: THIS MUCH WE KNOW

Our challenge

820
people in Doncaster were living with a diagnosis of breast, bowel or prostate cancer last year

3% a year
The long term increase in the number of people with these cancers

£2 MILLION
a year
Extra money needed by 2030 to be able to treat these people locally across the Working Together Programme region

Number of unique patients 2015–16*

Breast cancer
396 people

Prostate cancer
148 people

Bowel cancer
276 people

Cancer affects younger people, too

Women
54%

Men
29%

Over half of female patients with these cancers are under 65 when they are diagnosed, compared to less than a third of men**

This is mostly because breast cancer affects younger women more often than other types of cancer

The good news: more people are surviving cancer

More people than ever before are surviving for at least a year after their cancer diagnosis

While one-year survival rates in Doncaster are slightly below the national average, for bowel cancer our rate of improvement is faster – we’re closing the survival gap (No data for prostate cancer. Source: Office for National Statistics)

One-year survival rates, %
